

A detailed botanical illustration of a lavender plant, featuring several upright stems with clusters of small purple flowers and long, narrow green leaves. The plant is centered in the background. In the top-left and bottom-right corners, there are decorative sprigs of eucalyptus-like leaves, which are rounded and have a silvery-green hue. The entire composition is set against a light cream background.

Lavender is soft and deep
Purple flowers calm the day
It will rock us off to sleep
Breathe in slow and drift away

Lavender

Lavandula angustifolia

Lavandula officinalis

Lamiaceae

A detailed botanical illustration of a lavender plant, showing green, oval-shaped leaves and small, light-colored buds. The plant is positioned in the top-left and bottom-right corners of the page, framing the central text.

Lavender

Lavandula angustifolia

Herbal Actions

- Calms and soothes (a nervine)
- Cooling
- Drying

Taste

- **Bitter, like dark leafy greens**
- **Pungent, like a little sniff of pepper**

Identify by

- Tiny purple flowers on tall, thin spikes
- Narrow gray-green leaves, a little rough
- A clean, sweet smell when you rub a bud

Caution

Smell and touch the dried buds, but do not eat them.

Lavender oil is very strong, so we never taste it.

Grown-ups: skip the oil inside if pregnant or on calming medicines.
