

A detailed watercolor illustration of a Tulsi plant. The central focus is a cluster of green, serrated leaves with prominent veins, growing on a reddish-brown stem. Several upright spikes of small, light purple flowers are visible. The background is filled with more delicate, lighter green leaves and stems, creating a lush, natural feel. The overall style is soft and artistic, typical of botanical watercolor art.

Ocimum tenuiflorum · Lamiaceae

Tulsi

Slow medicine. Steady strength.

Tulsi Oxymel

INGREDIENTS

- Fresh tulsi leaves (enough to pack jar half)
- ½ cup raw honey
- ½ cup raw apple cider vinegar with mother
- 16 oz pint jar

METHOD

1. Pack jar HALF FULL with fresh tulsi.
2. Pour ½ cup raw honey on top.
3. Pour ½ cup raw ACV to fill the jar.
4. Write your hypothesis in the garden journal.
5. Seal. Shake daily for 8 weeks.
6. Week 10: strain. Bottle. Label with start date.

Vovó says:

*Slow medicine teaches slow trust.
Shake the jar.*

SAFETY:

Adult sterilizes the jar. Tulsi may lower blood sugar — ask a grown-up first.

*Cease striving and know that I am
God; I will be exalted among the
nations...*

PSALM 46:10 (NASB)

CHANT: TULSI — SEE WEEK 2.
